

FreeWeight Maintenance Instructions

INITIAL CLEANING

- A. Remove all of the surface soil, debris, sand and grit by sweeping, dust mopping or vacuuming.
- B. Scrub the floor with a neutral detergent (pH 7.0-8.5) using a buffer, auto-scrubber with a soft nylon brush or a lint-free damp mop.
- C. Change the water frequently during the cleaning process to ensure the removal of the dirt.
- D. Remove soiled solution with the auto scrubber or a wet-vac.
- E. Allow the floor to dry thoroughly for approximately 6-8 hours.

If other trades will be in the area after the initial cleaning, protect the flooring with plastic

REGULAR CLEANING

- A. Remove all surface debris, soil, and grit by sweeping, dust mopping or vacuuming.
- B. Damp mop floor with a non-abrasive and solvent free neutral-pH detergent and a lint free mop. Please follow the manufacturer's guidelines for the concentration of the cleaning solution.
- C. For higher traffic areas, we recommend using commercial floor scrubbing equipment and a soft nylon brush.
- D. Remove the soiled solution with the auto-scrubber or a wet-vac.
- E. Allow the floor to dry thoroughly for approximately 6-8 hours.
